HIRARKI ARDI PRATAMA

Senior Android Kotlin Developer
Jakarta Selatan, Indonesia | +62 895-8002-67596 | hirarki.pratama@gmail.com | LinkedIn: Hirarki Pratama

---

PROFESSIONAL SUMMARY

Dedicated Android Developer with 5+ years of extensive experience building scalable, enterprise-grade native mobile applications in financial services, insurance, and enterprise operations. Deeply versed in modern Android development using Kotlin, Coroutines, Flow, Jetpack components, and Clean Architecture (MVVM/MVI). Proven success at AXA Mandiri engineering high-volume, secure financial transaction workflows, integrating biometric authentication, and maintaining 99.8%+ crash-free session stability. Skilled at optimizing app performance, modularizing architectures, and conducting unit/UI testing.

TECHNICAL SKILLS

- **Languages:** Kotlin, Java, Dart, SQL
- **Android Architecture:** Clean Architecture, MVVM, MVI, Repository Pattern, Multi-Module Architecture, SOLID
- **Android Jetpack & Core:** Jetpack Compose, ViewModel, LiveData, Kotlin Coroutines, StateFlow / SharedFlow, Navigation Component, Lifecycle, WorkManager
- **Data Persistence & Local DB:** Room Database, EncryptedSharedPreferences, DataStore, SQLite
- **Dependency Injection & Networking:** Hilt, Dagger 2, Retrofit 2, OkHttp 3, Moshi / Gson, RESTful APIs
- **Quality & Testing:** Unit Testing (JUnit 4/5, Mockk, Mockito, Truth), UI Testing (Espresso), LeakCanary, Android Studio Profiler
- **Cloud, Services & Integrations:** Firebase (FCM, Crashlytics, Remote Config, Auth), Agora RTC, OneSignal, QR Code / Barcode Scanning (CameraX / ML Kit)
- **Build & DevOps:** Gradle (Kotlin DSL / Groovy), ProGuard / R8, Git, GitHub Actions, CI/CD, Google Play Console

---

PROFESSIONAL EXPERIENCE

AXA Mandiri — Jakarta Selatan, Indonesia

Senior Android Developer | Nov 2022 – Present

- Engineered and scaled native Android enterprise applications supporting mission-critical insurance, policy tracking, and financial advisor sales workflows.
- Refactored legacy modules into Clean Architecture with MVVM, Kotlin Coroutines, and Flow, eliminating background thread blocking and cutting app memory footprint by 25%.
- Designed and integrated secure banking-grade authentication features, including biometric authentication (BiometricPrompt), hardware-backed keystore session management, and SSL certificate pinning.
- Implemented resilient network and offline-first capabilities using Retrofit, OkHttp interceptors, and Room Database, enabling seamless offline draft submissions for financial advisors.
- Reduced app crash rates to under 0.2% by proactively integrating Firebase Crashlytics, tracking ANRs, and resolving memory leaks using Android Profiler and LeakCanary.
- Collaborated closely with cross-functional Scrum teams (Backend, Security, QA, and Product Owners) to ship bi-weekly stable releases adhering strictly to OJK/banking compliance standards.

PT Ragdalion Revolusi Industri — Cikarang, Indonesia

Android Developer | Mar 2021 – Sep 2022

- Built and maintained native Android and mobile applications across industrial management and healthcare sectors.
- **IWWI (Industrial Maintenance Management System):** Spearheaded the development of a native Kotlin application for tracking machine health and maintenance schedules across industrial facilities.
- Built high-accuracy real-time equipment registration and asset verification using CameraX and QR-code scanning libraries.
- Implemented real-time telemetry dashboards and push notification alerts using Firebase Cloud Messaging (FCM) to notify technicians of urgent equipment downtime.
- Streamlined background synchronization tasks using Android Jetpack WorkManager, guaranteeing reliable data uploads under unstable industrial network conditions.

PT Maestro Manajemen Nusantara — Malang, Indonesia

Android Developer | Feb 2020 – Feb 2021

- Built a comprehensive Android school attendance management platform serving students and faculty members.
- Migrated legacy Java modules to modern Android design patterns, improving overall UI responsiveness and stability.
- Integrated GPS-based geofencing and real-time attendance logging connected via secure RESTful APIs.
- Developed and optimized backend REST endpoints using PHP/Lumen and MySQL to ensure rapid sub-second query response times.

SELECTED PROJECTS

- **IWWI (Industrial Asset & Maintenance Tracker):** Native Android (Kotlin) app featuring CameraX QR scanning, Room DB for offline caching, WorkManager for scheduled synchronization, and Firebase Realtime notifications.
- **Enterprise Attendance & Verification System:** Native Android application featuring biometric/GPS geofencing verification, real-time data sync, and dynamic role-based access control.

EDUCATION

Institut Teknologi Nasional Malang
Bachelor of Computer Science, Informatics Engineering | 2016 – 2020
